

# Reconstructing and visualising cell lineages

**Irepan Salvador-Martínez**

@irepan\_salvador

**University College London, UK**

UAB Seminars Recerca

September 27, 2019

# Cell lineage

Key concept in Dev. Biol.

- Developmental history of a cell traced back to the zygote
- Poorly known in most animals

# Cell lineage

Key concept in Dev. Biol.

- Developmental history of a cell traced back to the zygote
- Poorly known in most animals

How can it be determined?

- Direct observation
- Labelling techniques
- **Somatic mutations**

Wasserstrom et al., 2008

## GREAT IDEA!!

### CRISPR-Cas9 mutations can be used as lineage markers!

- Irreversible mutations accumulate in Development

Several published recorders in past 2 years  
But... HOW ACCURATE ARE THESE TREES?

## Bring on the simulations!

### Aim:

A lineage of 16 cell divisions (65K cells  $\simeq$  *Drosophila* larva)

#### Parameters

-  Mutation rate
-  Number of Targets
-  Different mutations

**Zygote**  
Cell lineage  
reconstruction

Inferred tree

Reference tree

Accuracy = 50%

## Bring on the simulations!

### Aim:

A lineage of 16 cell divisions (65K cells  $\simeq$  *Drosophila* larva)

## Fine-tuning the mutation rate

32 variants of *emx1.6* (Hsu et al. 2013)

Single-double mismatches; alternative PAM sequence

Marco Grillo & Michalis Averof  
(IGFL, Lyon)

# Test recorder under different scenarios!

## Dropouts

## Conclusions

- CRISPR recorders are an exciting technology
- Lots of room for improvement
- Simulations are useful!

If you want to know more..
